

Introducing the

ATSC4 Module

A new **high-performance product** purpose-built to **enhance the flexibility of the COM3000 video solution.**

- 4 ATSC off air or J.83b (QAM-B) input tuners
- Up to 32 Independent SPTS IP Output Streams
- RF input, Multicast, or Unicast output
- Set up by COM51 interface or independently

Adaptable input

Four ATSC off-air or J.83b (QAM-B) input tuners allow for flexibility in channel reception, enabling input from an antenna for off-air TV broadcasts or via cable for clear QAM channels.

FMix & match content

The ATSC4 can operate independent of other sources or can be set up and managed by the COM51 interface, with the ability to combine content from this device with content from other COM sources, if desired.

Simultaneous streams

The ATSC4 supports up to 32 Independent SPTS IP Output Streams (sub channels), delivering premium access to the major networks (i.e. ABC, CBS, NBC & FOX) and up to 7 sub channels provided by local broadcasters.

Network freedom

RF input, Multicast, or Unicast output allows for easy signal distribution, either through traditional RF-based TV setups or IP-based installations.

Future-ready

The ATSC4 hardware is poised to support the latest ATSC3.0 standard to ensure your installation is prepared for emerging tech including 4K HDR video, Dolby Atmos audio, interactive features, and on-demand video.*

*Future software upgrade needed
