The Future of Entertainment Is Changing

→ Home entertainment has evolved far beyond simply accessing content.

Today's consumers expect **immersive experiences, intuitive interaction, elegant devices**, and seamless connectivity across every aspect of their entertainment journey. As streaming services, voice technologies, and personalized experiences become increasingly mainstream, subscribers are placing greater value on the quality of the overall experience—not just the content itself.

At the same time, operators face growing pressure to differentiate their video offerings in an increasingly competitive market.

The next generation of entertainment will be defined by experiences that are **smarter, richer, and more engaging**.

Why Operators Need New Ways to Differentiate

→ Consumers now have access to more content than ever before.

Competition among video services continues to increase, while differences between content libraries become less visible to end users. In this environment, hardware and user experience are becoming important tools for differentiation.

Operators need innovative ways to create value beyond traditional TV delivery.

Soundscape Mini helps operators enhance their entertainment offering by combining:

Advanced TV
functionality

Immersive audio
experiences

Voice
interaction

Wi-Fi 7
connectivity

Edge-AI enabled
user experiences

Operator customization
opportunities

all within a single compact platform.

The result is a differentiated entertainment solution **that increases perceived value while simplifying deployment and integration.**

Introducing Soundscape Mini

A New Category of Entertainment Device

Compact Audio

Soundscape Mini combines the power of a next-generation set-top box with an integrated audio system in a remarkably compact form factor.

Premium Entertainment

Built on Vantiva's Emerald v2 platform, it brings together **immersive sound, voice interaction, advanced entertainment experiences, and operator customization** in a single device.

Designed to deliver better-than-TV audio without the size, complexity, or cost of a traditional soundbar solution, Soundscape Mini opens new possibilities for operators looking to enhance subscriber experiences while maintaining simplicity.

For years, service providers have relied on separate devices to enhance video and audio experiences.

→ Soundscape Mini changes that approach.

By integrating premium audio capabilities directly into the entertainment platform, **Soundscape Mini creates a new category of device** that merges video, voice, and sound into a single seamless experience.

Rather than adding hardware around the television, operators can provide a compact, all-in-one solution that delivers richer entertainment experiences from day one.

The result is simpler deployments, reduced clutter, and a more elegant entertainment environment for subscribers.

Designed for Immersive Entertainment

Wi-Fi 7 Ready Connectivity

With Wi-Fi 7 capability, Soundscape Mini is designed to support next-generation wireless performance for high-bandwidth entertainment services, low-latency streaming, and more reliable connectivity in increasingly crowded home networks.

Far-Field Voice and Smart Assistant Interaction

Integrated microphones enable convenient far-field voice interaction and smart assistant experiences, giving subscribers a more natural way to search for content, control entertainment, manage everyday tasks, and interact with connected services in the home.

Advanced Entertainment Platform
